

Light Reflectivity*

Vinyl Composition Tile

Premium Excelon® Feature™ Tile & Strip

All light reflectivity values listed are based on a percentage system, the higher the percentage (e.g., 20-24, 35-39), the higher the light reflectance of the floor. It is measured per ASTM E1349, *Standard Test Method for Reflectance Factor and Color by Spectrophotometry Using Bidirectional (45°: 0° or 0°: 45°) Geometry*. Research indicates reflectance can help drive daylight further into space and reduce reliance on artificial lighting, resulting in reduced electricity usage and costs. Glare from flooring is a characteristic of glossy finishes, not reflectance. Flooring in lighter colors with a matte finish have high reflectance values, but do not add to glare. Flooring with light reflectivity values greater than 25% can contribute to LEED® Interior Lighting Credit.

**Feature Tile & Strip is designed as an accent element and is not recommended for full-room installation. Light Reflectance Values (LRVs) are provided for projects where this information is required.*

Value	SKUs
