

Medintone[™]

We extensively test all our products to determine how our different flooring products will perform in use and how the flooring will react to staining reagents. Owners and specifiers know the types of substances that may potentially stain surfaces in their building. This chart is designed to provide owners and specifiers with accurate information about a wide variety of cleaners, disinfectants, foods, beverages, oils, organic solvent, and other substances that may be found in buildings and affect the performance of the floor.

Resistance to Staining Reagents

Samples were tested as manufactured (no additional surface treatments). All samples were exposed to reagents for 24 hours (uncovered), then cleaned with a neutral commercial cleaner & cotton cloth.

A key for interpreting results is found below. It is important to note that in some cases, residual stain, residues, and surface dulling may be further reduced or eliminated with different or more aggressive cleaning procedures and/or cleaning agents other than the common method used for this multi-product comparison. For further details on appropriate cleaning methods and care for specific products, please consult the care and maintenance guidelines for the specific product at ArmstrongFlooring.com or contact Armstrong Flooring at 1-866-243-2726.
