The test report attached verifies the fire performance for Armstrong Sheet Flooring. The product tested is representative of, but may not be identical to the product you are purchasing. Changes in product formulation that occur for a variety of reasons may cause fluctuations in results. The above referenced data is representative of the current formulation of these products. Specifications and interpretation of fire test methods are subject to ongoing development. To assure that the information continues to be current, it is suggested that you request product certification for a specific project. The certification will reference the current applicable independent laboratory test reports.

Report On
Critical Radiant Flux of Floor-Covering Systems
Using a Radiant Heat Energy Source
As Determined By
ASTM E 648 Test Method

PREPARED FOR:
Armstrong Flooring Inc.
Lancaster, PA
TEST NUMBER: FRP-992R
Armstrong Commercial Vinyl Composition Tile (VCT)

Date of Issue:
4/20/2016

Date of Revision:
4/11/2017
I. SCOPE
This report contains the reference to the test method, purpose, test procedure, preparation and conditioning of test samples, description of materials, test and post test observation data, and test results.

II. TEST METHOD
The test was conducted in accordance with ASTM Designation E 648, “Standard Method of Test for Critical Radiant Flux of Floor Covering Systems Using a Radiant Heat Energy Source.” The test is also described by NFPA No. 253.

III. PURPOSE
The purpose of the test is to determine the critical radiant flux of horizontally-mounted floor covering systems exposed to a flaming ignition source in a graded radiant heat energy environment maintained in a test chamber. The specimen may be mounted over underlayment, a simulated concrete structural floor, bonded to a simulated structural floor, or otherwise mounted in a typical and representative way.

The test method provides a basis for estimating one aspect of fire exposure behavior for floor covering systems. The imposed radiant flux is designed to simulate the thermal radiation levels likely to impinge on the floors of a building whose upper surfaces are heated by flames and/or hot gases from fully developed fire in an adjacent room or compartment. The method was developed to simulate an important fire exposure component of fires which may develop in corridors or exit ways of buildings and is not intended for routine use in estimating flame spread behavior of floor covering in building areas other than corridors or exit ways.

IV. TEST PROCEDURE
The basic elements of the test chamber are: 1) an air-gas, fueled radiant heat energy panel inclined at 30° to and directed at 2) a horizontally-mounted floor covering system specimen. The radiant panel generates a radiant energy flux distribution ranging along the 100-cm length of the test specimen from a nominal maximum of 1.0 watts/cm² to a minimum of 0.1 watts/cm². The test is initiated by open flame ignition from a pilot burner. The distance burned to flame-out is converted to watts/cm² and reported as critical radiant flux.
## Test Number: FRP-992R

### Material Tested:
Armstrong Commercial Vinyl Composition Tile (VCT)

### Sample Information:

| Detailed Product Description: | Exact Product Tested: Raffia Stream, Pattern #55911, Lot D068A. Product Lines with Similar Construction: Raffia, ChromaSpin, Stonetex, Arteffects, Companion Square, Imperial Texture Rave, Imperial Texture, Imperial Texture Classics, MultiColor, Feature Tile/Strips, SDT, Safety Zone, Civic Square and Crown Texture. The material was adhered to a 1/4” cement board backer using Armstrong S-515 adhesive. Samples were selected and prepared by Armstrong. |
| Number of Samples: | 3 |
| Surface Exposed: | Surfaces (Faces Only) |
| Average Thickness (in.): | 0.374 |

Average Critical Radiant Flux (W/cm²): 0.99

| Standard Deviation: | 0 |
| Coefficient of Variation: | 0.24% |

### Observations:
Blistering during the 5 minute preheat.

### Remarks:
Weights and thicknesses include the 1/4” cement board backer.
Revision 02/10/17: Armstrong Flooring changed to Armstrong Flooring Inc.
Revision 04/11/17: “Crown Texture” was added to the list of products with similar construction.

### Conclusions:
The product is classified as Class I (Critical Radiant Flux > 0.45 W/cm²) by NFPA 101.

### Test Operator:
CP
