Testing

- **Performance**
  - Wear Layer Composition
  - Wear Layer Thickness
  - Total Thickness
  - Residual Indentation
  - Flexibility
  - Resistance to Chemicals
  - Resistance to Heat
  - Resistance to Light
  - Static Load Resistance @ 175 psi
  - Static Load Resistance
  - Fire Test Data – Flame Spread
  - Fire Test Data – Smoke Evolution
  - Fire Test Data – Canada
  - Wear Group Classification per EN649-volume loss
  - Bacteria Resistance
  - ADA Standards for Accessible Design
  - Antistatic Properties
  - Static Coefficient of Friction**

- **Certificate of Compliance**
  - ASTM F 410
  - ASTM F 386
  - ASTM F 1914
  - ASTM F 137
  - ASTM F 925
  - ASTM F 1514
  - ASTM F 1515
  - ASTM F 970
  - ASTM E 648
  - ASTM E 662
  - CAN/ULC S102.2
  - EN 660-2
  - ISO 846: Part C
  - EN 1815
  - EN 2047/UL 410

*Testing at loads above 175 psi is outside the scope of the test method. Since testing is conducted on uninstalled flooring, results do not consider the performance of the adhesive, underlayment, or subfloor. These test results are not an indicator of the installed flooring system performance.

** Using the James Machine as described in D2047 and as directed in UL 410 with a leather foot under dry conditions. The application of site-applied floor sealers, polishes and other types of finishes routinely used to maintain resilient flooring materials will change the walking surface and consequently the SCOF value.
