^{*} Testing at loads above 250 psi is outside the scope of the test method. Since testing is conducted on uninstalled flooring, results do not consider the performance of the adhesive, underlayment, or subfloor. These test results are not an indicator of the installed flooring system performance.

** Using the James Machine as described in D2047 and as directed in UL 410 for floor covering materials (FCM) using a leather foot under dry conditions. The application of site-applied floor sealers, polishes and other types

of finishes routinely used to maintain resilient flooring materials will change the walking surface and consequently the SCOF value.

For best results, we recommend that Diamond 10°Technology products are used throughout a single installation. Installations combining Raffia° Stream* with Diamond 10° Technology, Striations with Diamond 10° Technology and Migrations® with Diamond 10® Technology and any other standard commercial tile require site specific maintenance instructions and are subject to warranty exclusion. Contact the Armstrong Flooring Techline with any further questions.
